

Questions

Question from LDV:

Please provide the brand and model number of the dispatch stations and the number of radios which will be interfaced.

Response from Lt. FaBrand:

Harris 800Mhz control station, the actual consoles will likely to be zetron. Also the Harris vhf/uhf control stations need to be rack mounted. The 800Mhz control station should also be compatible on the 700Mhz frequency as well, that is the combined unit.

Our vendor and the Sheriff's Office will select the final models based on remaining funds and work with them for installation. The command center vendor should allocate appropriate rack space and plan on running appropriate power and communication cables for the two positions from the rack which are cloth.
